### Executive Summary

The Trial Court Facility Modification Working Group (working group) and the Administrative Office of the Courts (AOC), Office of Court Construction and Management recommend a budget of \$30 million for statewide court facility modifications and planning in fiscal year (FY) 2011–2012. We also recommend a prioritized list of facility modifications ranked according to the policy prescribed by the Judicial Council. This budget amount reflects the current legislatively authorized funds for court facility modifications, and these rankings prioritize hundreds of needed facility modifications according to their relative criticality and necessity.

## Recommendation

The Trial Court Facility Modification Working Group and the Administrative Office of the Courts (AOC), Office of Court Construction and Management recommend that the Judicial Council, retroactively effective July 1, 2011:

1. Approve a budget of \$30 million, as allocated by the Legislature, for statewide court facility modifications and planning in fiscal year (FY) 2011–2012, as follows:
  - A reserve of \$4 million for immediate or potential emergency needs (priority 1) that may develop in facilities;
  - No allocation for facility modification requests under planned priorities 2–6<sup>1</sup>;
  - An allocation of \$3.5 million for statewide facility assessments and facility modification planning, including the costs of contracts, equipment and materials to set up operations; development of building-specific facility management plans and procedures; development of hazardous material plans; and continuation of facility condition assessments; and
  - An allocation of \$22.5 million (the remainder of the budget) for unforeseen or out-of-cycle requests under priorities 2–6.
2. Approve the prioritized list of facility modifications (Attachment C), which is ranked according to the policy prescribed by the Judicial Council (Attachment A). According to this policy, the working group may make adjustments to the prioritization of planned priorities 2–6 requests and reallocate funds among the budget categories.

## Previous Council Action

On December 2, 2005, the Judicial Council adopted and, on April 24, 2009, revised its *Prioritization Methodology for Modifications to Court Facilities* (policy) (Attachment A). This policy presents a methodology and process for prioritizing modifications to court facilities for which responsibility or title has been transferred to the Judicial Council.<sup>2</sup> The policy:

- Defines facility modifications;
- Adopts a policy of prioritizing improvements and repairs to existing court space and buildings according to their relative criticality and necessity;
- Outlines a process for requesting and prioritizing facility modifications and establishes the statewide working group that approves individual facility modification funding and recommends a ranked list of approval; and
- Delegates to the council’s Executive and Planning Committee approval each year of the ranked list and budget category allocations.

---

<sup>1</sup> These priorities, established when the council adopted the *Prioritization Methodology for Modifications to Court Facilities*, are described in more detail under “Previous Council Action.”

<sup>2</sup> As of December 2009, responsibility for 532 court facilities had been transferred from local to state jurisdiction.

In the policy, the council established six priority categories:

- Priority 1—Immediately or Potentially Critical
- Priority 2—Necessary but Not Yet Critical
- Priority 3—Recommended
- Priority 4—Does Not Meet Current Codes or Standards
- Priority 5—Beyond Rated Life but Serviceable
- Priority 6—Hazardous Materials, Managed but Not Abated

Also in the policy the council established a working group composed of members selected for three-year terms by the Trial Court Presiding Judges Advisory Committee and the Court Executives Advisory Committee. The Chief Justice appoints the chair from the working group membership.

The policy requires the working group to review facility modification requests from across the state, review an AOC staff report with a preliminary ranked list, receive comments from the trial courts on the preliminary list, and finalize a ranked list for approval.

After a budget and ranked list of modifications for the coming year is approved, the policy gives authority to the working group to make adjustments to the prioritization of planned priorities 2–6 requests and to reallocate funds among the four facility modification budgets: statewide facility modification planning; priority 1; planned priorities 2–6; and unforeseen or out-of-cycle priorities 2–6.

Historically, the Executive and Planning Committee, using the authority delegated to it by the Judicial Council, approved the facility modification budgets in FY 2006, 2007, 2008, and 2009. However, in 2010 the Executive and Planning Committee declined to approve the facility modification budget and set the budget approval on the Judicial Council’s business agenda, in large part due to a significant budget increase. The Judicial Council approved the FY 2010–2011 budget of \$50 million and the prioritized list on October 29, 2010.

### **Rationale for Recommendation**

The Facility Modification Program is funded from two sources:

- State Court Facilities Construction Fund (SCFCF—Sen. Bill 1732)
- Immediate and Critical Needs Account (ICNA—Sen. Bill 1407)

The total facility modification budget for FY 2011–2012, \$30 million, consists of \$15 million in SCFCF funds and \$15 million in ICNA funds authorized by the Legislature. The AOC requested but did not receive an augmentation of funds for facility modifications. The rationale for each budget category is set forth below.

## **Recommendation 1: Budget allocations**

***Budget for priority 1 requests.*** A reserve of \$4 million is recommended for allocation to immediate or potential emergency needs (priority 1) that may develop in facilities. The money allocated reflects a decrease of \$1 million from FY 2010–2011 and is based on the approximate amount needed for last year.

***Budget for planned priorities 2–6 requests.*** Like last year, the working group recommends that no funding be allocated to facility modifications listed under planned priorities 2–6. This will allow the vast majority of FY 2011–2012 funds to be made available throughout that fiscal year for the highest-priority facility modifications.

While the statewide facility transfer process has ended, over 3 million square feet of space is in the process of transitioning to AOC management. Statewide, less than 60 percent of the court facilities' square footage has been assessed, and the AOC Office of Court Construction and Management is in the process of performing the assessments. The majority of the square footage still to be assessed is in Los Angeles County. The results of these assessments will likely identify millions of dollars of need for priority 2 facility modifications; therefore, adequate funding must be held in reserve to address this potential need.

***Budget for statewide facility modification planning.*** The working group recommends allocating \$3.5 million for this category. The recommended allocation is targeted for the costs associated with facility assessments and facility modification planning, such as the costs of contracts, equipment, and materials to set up operations; development of building-specific facility management plans and procedures; development of hazardous material plans; and continuation of facility condition assessments. These tasks are required to identify deferred maintenance requirements, plan future requirements, and ensure proper maintenance, thereby reducing the need for future facility modifications. Most of the allocation for needed costs will be used for consultant labor expenses. The proposed allocation of \$3.5 million is based on the approximate amount needed for last year.

***Budget for unforeseen or out-of-cycle priorities 2–6 projects.*** The working group recommends the allocation of the remainder of the budget, \$22.5 million, to this category. The working group will review all facility modification projects and recommends funding for those with the highest priority. The working group budgets the funds from the unforeseen or out-of-cycle category proportionally over the course of the year, ensuring that funds are available for the highest priorities throughout the year.

## **Recommendation 2: Prioritized list of court facility modifications**

***Trial Court Facility Modification Working Group and how it functions.*** The Trial Court Facility Modification Working Group was established to review facility modification requests from across the state and approve all facility modification funding. The group, which consists of

four judges and three court executive officers, first met in April 2006. Since that time, the members have met in person every third month for a full-day session to review facility modification requests, approve funding for facility modifications, and provide overall guidance to the AOC on the prioritization and funding of facility modifications. These meetings are normally held at the AOC Northern/Central Regional Office in Sacramento, with the exception of the October 2010 meeting, held in San Diego on October 15, 2010. The next full meeting is scheduled for Woodland on October 28, 2011. In addition, the working group has a one-hour teleconference around each midpoint between the full meetings.

The working group was appointed by the Trial Court Presiding Judges Advisory Committee and the Court Executives Advisory Committee, as directed by the policy. The following are current members of the working group:

Hon. David Edwin Power, Judge of the Superior Court of Solano County, Chair  
Hon. Laura W. Halgren, Judge of the Superior Court of San Diego County  
Hon. William F. Highberger, Judge of the Superior Court of Los Angeles County  
Hon. Donald Cole Byrd, Presiding Judge of the Superior Court of Glenn County  
Ms. Sherri R. Carter, Court Executive Officer, Superior Court of Riverside County  
Ms. Kiri S. Torre, Court Executive Officer, Superior Court of Contra Costa County  
Mr. James B. Perry, Court Executive Officer, Superior Court of Yolo County

Judge Halgren and Ms. Carter joined the working group in July 2011. Judge Allan J. Preckel and Ms. Tressa Kentner completed their terms of service on the working group in June 2011.

At the first meeting, the working group developed a *Trial Court Methodology for Prioritizing and Ranking Facility Modifications* (the methodology) (Attachment B). The methodology implements the ranking requirement of the council's policy: potential facility modifications are prioritized by means of numerical scoring within each of the six categories. Facility modifications are first prioritized based on the criticality of the project in maintaining continuity of court operations. For example, all priority 2 modifications are ranked above all priority 3 modifications. Once prioritized the projects receive a ranking score within that priority category. This allows for implementation of the most critical projects within the highly restrictive and limited funding currently available to the program. The methodology was last updated in March 2010 to include refinements to the priority given to graffiti in nonpublic areas and to county-managed projects.

***Development of ranked list for FY 2011–2012 court facility modifications.*** Using the council's policy and the working group's methodology, AOC staff prepares a preliminary ranking list for the working group. The working group then reviews, revises, and finalizes the list. This list and a report of the working group's activities are posted on the Serranus website for review and comment by all in the judicial branch who wish to respond, and the comments of presiding judges and court executives are specifically solicited. Following the court comment period, the

list is revised, if needed, based on comments received, and then submitted to the Executive and Planning Committee for approval.

The working group and AOC staff followed this procedure in developing the FY 2011–2012 list. Using the policy’s guidance and scoring methodology, the working group assigned each facility modification a priority based on its scores in six categories. In turn, the working group compiled the prioritized list based on the rankings and totals in the six scoring categories.

The list includes all documented facility modifications that have not been funded, including modifications that are beyond the scope of what can be funded with the \$30 million appropriated by the Legislature for FY 2011–2012. One set of facility modifications is not ready for funding consideration until the scope of work for each is fully defined. These facility modifications will not be fully scored until such time as their complete scope and cost estimates are known. They are identified by the word “Scope” in the column labeled “ON HOLD,” and some have a placeholder cost estimate of \$51,999. These placeholders indicate that a particular facility modification is more than \$50,000, but a firm estimate has yet to be determined. Another set of facility modifications is being held back in the event that capital projects are delayed and action is required to keep the existing facilities operational. This group is identified by the word “Project” in the “ON HOLD” column. Facility modifications are not eligible for funding until the reason for a hold is resolved.

### **Comments, Alternatives Considered, and Policy Implications**

The Trial Court Facility Modification Working Group’s draft annual report, the proposed facility modification budget for FY 2011–2012, and prioritization of projects were posted on Serranus on May 20, 2011. A video providing an overview of the report and the TCFMWG process, which features Judge Power, chair of the Trial Court Facility Modification Working Group, was also posted on Serranus. In addition, information about and links to the report were included in several editions of *Court News Update*. The deadline for submitting comments was June 10, 2011. No comments were received.

Additional comment on the proposed FY 2011–2012 budget and prioritizations was solicited on July 4, 2011, from the members of the Trial Court Presiding Judges Advisory Committee and the Court Executives Advisory Committee through direct e-mails. One comment was received from Kim Turner, the court executive officer of the Superior Court of Marin County, on July 5, 2011. Ms. Turner submitted a question about the need for planning funds in light of the significant reduction in the overall budget. The continued level of planning support is needed to evaluate facilities in Los Angeles that are still transitioning from county responsibility to AOC responsibility. The allocation for statewide facility modification planning includes the costs of contracts, equipment, and materials to set up operations; development of building-specific facility management plans and procedures; development of hazardous material plans; and continuation of facility condition assessments.

The facility modification funding allocation is critical to maintain court operations. This funding is necessary to address emergencies, prevent outages and mitigate the pending failure of many building systems that are well past their designed life expectancy. If funding for facility modifications was not available the impact to court operations would be severe.

If facility modification funding had not been available in FY 2010–2011 the Stanley Mosk Courthouse would have been shut down for months after a flood instead of just three days. The Solano Justice Building, which saw public service counters shut down and court employees displaced in June 2010 after a fire, would not have had funding for repairs and court operations and would not have re-opened in July 2011. In addition, if funds had not been available to cover the required shared cost responsibilities of repairing a failed central plant in Ventura the AOC would have been in breach of contract with the county. \$20 million of the originally proposed \$50 million facility modifications budget has already been reallocated for court operations, any further decrease will create situations in which courts will not be able to operate or serve the public due to degradation of facility conditions.

### **Implementation Requirements, Costs, and Operational Impacts**

Regarding the broader issue of equity within the branch, the working group makes every effort to focus on the criticality of the projects, not their location or history. While it is possible that over a short period of time, one court may receive more funding on a square foot basis than another, this is the result of the facility needs. Over the longer term, these highs and lows will balance out.

The 25 percent designation in Government Code section 70374(d)<sup>3</sup> has been a concern for the working group over the past several years. While the working group has been asking how the 25 percent designation will be implemented and what impact it will have on the overall Facility Modification Program, the working group does not have the authority to implement the designation. The working group will continue to track the progress on the resolution of this issue at its regularly scheduled meetings. The chair and the members of the working group would be available to discuss this issue with any individuals or groups that may be developing the policy as it relates to section 70374(d).

---

<sup>3</sup> Section 70374(d) states:

(d) (1) Except as provided in Section 70374.2 and paragraph (2) of this subdivision, 25 percent of all moneys collected for the State Court Facilities Construction Fund from any county shall be designated for implementation of trial court projects in that county. The Judicial Council shall determine the local projects after consulting with the trial court in that county and based on the locally approved trial court facilities master plan for that county.

(2) Paragraph (1) shall not apply to moneys that have been deposited in the Immediate and Critical Needs Account of the State Court Facilities Construction Fund, established in Section 70371.5.

The FY 2011–2012 facility modifications budget will be allocated as described in recommendation 1 of this report. There is no cost to the trial courts associated with this recommendation.

### **Relevant Strategic Plan Goals and Operational Plan Objectives**

The facility modification program supports the goals of providing access to courts and court proceedings, allocating resources in a transparent and fair manner, modernizing management and administration, and providing infrastructure for service excellence. The program supports these goals by identifying and correcting facility deficiencies that could create barriers to access, allocating resources in a transparent and fair manner to ensure consistent court operations, and by carrying out projects to ensure court facilities are fully functional and the work environment is safe and secure.

# Prioritization Methodology for Modifications to Court Facilities

---

ADOPTED BY JUDICIAL COUNCIL:  
APRIL 24, 2009

(REVISION TO POLICY ADOPTED BY  
JUDICIAL COUNCIL DECEMBER 2,  
2005)

ADMINISTRATIVE OFFICE  
OF THE COURTS

---

OFFICE OF COURT CONSTRUCTION  
AND MANAGEMENT

## I. I. Purpose

This document presents a methodology and a process for prioritizing modifications to be made to trial court facilities for which responsibility or title has been transferred from county to state jurisdiction.

## II. Definitions

### A. Facility Modifications

A facility modification is defined as a generally planned, physical modification to a facility component or components that restores or improves the designed level of function of a facility or facility components. Such a modification can include, but is not limited to, a modification for fire and life safety, security, compliance with the Americans with Disabilities Act (ADA), or title 24 of the California Code of Regulations. A facility modification may also include a one-time modification of a building that is not expected to be repeated during the lifetime of the building, such as a seismic upgrade, or be an unplanned emergency response to failed systems or system components negatively affecting life safety or court operations, requires immediate attention, or requires substantial fund expenditures or scoping or design services to correct. Any collateral damage related to an emergency incident, or unknown finding discovered in the process of implementing any facility modification, will be corrected as part of the overall work performed. Facility modifications may or may not require design support. Facility modifications typically encompass additions of new systems, equipment, or other components not otherwise existing. Additionally, facility modifications involve alterations, renovations, replacements, or refurbishments to existing systems, equipment, or other components not considered routine maintenance and repair activities.

Facility modifications exclude routine maintenance and repair activities in that the latter include routine system parts replacement or repair on existing building components, as recommended by the manufacturers or industry-recommended service cycles to ensure the continued operation of systems. Maintenance activities may also include unplanned emergency repairs. Routine maintenance and repair activities include both minor activities, which involve unplanned and planned maintenance, and major activities, which are of a greater scope and typically require some design and engineering support.

Facility modifications are distinguished from major capital outlay projects in that the latter significantly increases the facility's gross area, as in a major addition to a structure; substantially renovate the majority of the facility; comprise a new facility or an acquisition; or change the use of the facility, as in a conversion from another use to court use

### B. Judicial Branch Facilities' Customer Service Center (CSC)

The CSC is a statewide, 24-hour service center created to receive, track, and control all work related to court facilities. This center is managed by the Facilities Management

Unit of Real Estate and Asset Management Services in the Administrative Office of the Courts (AOC), Office of Court Construction and Management (OCCM). The CSC is the primary contact point for unplanned trial court facility modification requests and all maintenance services. The e-mail address is [csc@jud.ca.gov](mailto:csc@jud.ca.gov).

**C. Statewide Facility Modifications Planning Budget**

The portion of the Facility Modifications budget set aside for planning, investigations, and other activities related to the identification, solution analysis and/or the development of Facility Modifications requirements, estimates, and plans. This does not include detailed design work for specific facility modifications. Design work is included in the cost of the individual Facility Modifications.

**D. Planned Priority 2–6 Budget**

The portion of the Facility Modifications budget set aside for work identified during the annual gathering of requirements or for work carried over from the previous fiscal year that was not funded.

**E. Unforeseen or Out-of-Cycle Priority 2–6 Budget**

The portion of the Facility Modifications budget set aside for work requested out of the normal annual-requirement gathering period or for work that is of a lower priority than the work in the Planned Priority 2–6 Budget, which may be funded during the year based on available funds and the priority of the requirement.

III. Priority Categories

**A. Priority Categories for Facility Modifications**

Facility modifications will be assigned one of the following six priority categories. These priority categories are based on methods commonly used by private sector facility management firms. As described below, facility modifications will be prioritized based on priority category, specific justifications, the effect on court operations, public and employee safety, risk management and mitigation, funding availability, equity among the courts, implementation feasibility, cost/benefit analysis, and planning and design status of major capital improvements.

Facility modifications that are determined to be priority 1 will be addressed immediately and regardless of whether the court occupies a shared-use facility. Planned priorities 2–6 facility modifications requested for shared-use facilities will be assigned an appropriate priority category. Their prioritization and implementation may be dependent, however, on financial participation by the county that shares the building. Priority categories for facility modifications are as follows:

1. **Priority 1—Immediately or Potentially Critical.** Condition requires immediate action to return a facility to normal operations, or a condition that will become immediately critical if not corrected expeditiously. Such conditions necessitate the need to stop accelerated deterioration or damage, to correct a safety hazard that imminently threatens loss of life or serious injury to the public or court employees, or to remediate

intermittent function and service interruptions as well as potential safety hazards. Such conditions may include, but are not limited to, the following: major flooding; substantial damage to roofs or other structural building components; or hazardous material exposure. Depending on scope and impact, a severe deterioration in life safety protection may also be considered a priority 1 condition requiring a facility modification.

Owing to their critical nature, priority 1 requests will be addressed immediately by AOC staff using internal procedures that ensure timely and effective responses to unplanned emergency or potentially critical conditions, including a method and a process for setting aside funds to address priority 1 conditions.

2. **Priority 2—Necessary, But Not Yet Critical.** Condition requires correction to preclude deterioration, potential loss of function or service, or associated damage or higher costs if correction is further deferred.
3. **Priority 3—Recommended.** Condition to be addressed will reduce long-term maintenance or repair costs or will improve the functionality, usability, and accessibility of a court. The condition is not hindering the most basic functions of a facility, but its correction will support improved court operations.
4. **Priority 4—Does Not Meet Current Codes or Standards.** Condition does not conform to current code requirements, yet it complied at the time of initial construction. Such conditions are considered legally nonconforming and are generally not required to be modified to meet current code requirements.
5. **Priority 5—Beyond Rated Life, But Serviceable.** Condition is currently adequate but cannot be expected to function as designed in the future.
6. **Priority 6—Hazardous Materials, Managed But Not Abated.** Condition involves hazardous materials, such as asbestos or lead-based paints, which are currently managed in place but not yet remediated.

#### IV. Process for Requesting and Prioritizing Facility Modifications

##### A. Requesting Facility Modifications

Facility modifications priorities 2–6 will be identified by court and AOC personnel in advance of each fiscal year. Thereafter, emergency priority 1 items and unplanned requests are made to the CSC to initiate a facility modification. The AOC staff will work collaboratively with the local court to assign a priority category to each request, resolve any questions, develop a preliminary cost estimate, and finalize the scope of the request.

1. **Priority 1 Requests.** Owing to their critical nature, priority 1 requests will be addressed immediately by AOC staff using internal procedures that ensure timely and effective responses to unplanned emergency or potentially critical conditions, including a method and a process for setting aside funds to address priority 1 conditions. Priority 1

requests can be made by the courts' contact to the CSC, followed by submission of an online Facility Modifications Request Form to the AOC in the process described below:

**2. Priorities 2–6 Requests.** Priorities 2–6 requests will be annually developed by the AOC and each court. Thereafter, for unplanned midyear needs, the court may initiate a request for facility modifications using an online Facility Modifications Request Form. The request will outline the problem to be addressed and state the impact if the problem is not addressed. The form will be e-mailed to [csc@jud.ca.gov](mailto:csc@jud.ca.gov). If the court initiates a facility modifications request, the e-mail must originate from the presiding judge, the court executive officer, or their designees of record, as reported to the AOC. If AOC staff initiates a request, the e-mail must be approved by the OCCM director or an assistant director or manager.

The request form will be processed by the staff of the CSC and tracked in the Computer-Aided Facilities Management (CAFM) database.

**B. Prioritizing Requests for Priorities 2–6 Facility Modifications**

The superior courts will annually request priorities 2–6 facility modifications for each forthcoming fiscal year and AOC staff will assign a priority category to each request, develop a preliminary cost estimate, and finalize the scope of the request. AOC staff will then prepare a report on pending trial court facility modifications. Each report will include a preliminary ranked list of all pending requests, including a summary of the rationale for the preliminary ranking. Preliminary ranked lists of all requests will be prepared by AOC staff based on the following factors: priority category; specific justifications; the effect on court operations, and on public and employee safety; risk management and mitigation; funding availability; equity among the courts; implementation feasibility; cost/benefit analysis; design and plan status; and planned major capital improvements.

A Trial Court Facility Modifications Working Group (the working group) will be established to review facility modification needs across the state. On an annual basis, will review the AOC staff report, which includes a preliminary ranked list of all pending requests and a rationale for the ranking. The reports prepared by AOC staff will be submitted to the working group for its meetings in advance of each budget year cycle.

Based on a review of the AOC reports and any other additional information, the working group will develop an annual report that includes a recommended prioritized list of planned priorities 2–6 facility modifications and a list of funded facility modifications. These preliminary prioritized lists for funding will utilize the same factors indicated above. The working group's annual report, including a list of all requested facility modifications received and under consideration for ranking and the preliminary ranked list of planned priorities 2–6 facility modifications, will be made available to the trial courts for comments by posting it onto Serranus and through distribution to the chairpersons of the Trial Court Presiding Judges Advisory Committee and the Court Executives Advisory Committee. All comments will be considered and addressed by the working group. All comments and working group responses will be presented to the;

Executive and Planning Committee (E&P Committee), as part of the final report of the working groups.

**C. Trial Court Facility Modifications Working Group Membership and Terms of Service**

Persons selected for the working groups will be members of the judicial branch (the branch) affiliated with any court in the state and possessing knowledge of or interest in facilities management or construction. Members of the branch affiliated with any court in the state will include justices, judges, subordinate judicial officers, and court staff. The working group will be composed of four members of the branch selected by the Trial Court Presiding Judges Advisory Committee and three members of the branch selected by the Court Executives Advisory Committee. The chair of the working group will be appointed by the Chief Justice from the membership of the group. Members will serve a three-year term. The chair may be extended for a fourth year at the discretion of the Chief Justice. The chair at the time of adoption of this policy will establish a rotation process to establish a cycle where normally no more than three members are replaced each fiscal year. Time served prior to the adoption of the policy will not count toward the three-year term, but no member will serve for more than six consecutive years. The AOC staff will be responsible for notifying the respective selection committee when new members need to be appointed. The working group is envisioned to confer as often as necessary to review and prioritize requests for planned priorities 2–6 facility modifications.

**D. Trial Court Facility Modifications Working Group Procedures**

On an annual basis, the working group will provide a full report to the E&P Committee on pending priorities 2–6 facility modifications requests, including the preliminary ranked list of modifications. In approving the final ranked list, the E&P Committee will consider those factors used by the working groups, including priority category; specific justifications; the effect on court operations, and on public and employee safety; risk management and mitigation; funding availability; equity among the courts; implementation feasibility; cost/benefit analysis; design and plan status; and planned major capital improvements. The final ranked list will be based on an analysis of these factors, the annual report prepared by the working group, additional information requested by the E&P Committee as necessary to determine a final list, and the funds available for addressing priorities 2–6 conditions as defined by the Judicial Council in the process of establishing the annual budget. The ranked lists approved by the E&P Committee will be the basis on which the AOC will proceed to implement facility modifications. AOC staff will manage the work from design through construction, inspection, and acceptance. The AOC will work collaboratively with local courts to implement facility modifications.

There may be justifiable reasons for making adjustments to the prioritization of planned priorities 2–6 requests and reallocating of funds among the four facility modification budgets—statewide facility modification planning, priority 1, planned priorities 2–6, and unforeseen or out-of-cycle priorities 2–6—during the course of a year. Therefore, the

## Attachment A

working group has the authority to make adjustments to the prioritized list of priorities 2–6 facility modifications and adjust funds among the four budgets for facility modifications as necessary.

# Trial Court Methodology for Prioritizing and Ranking Facility Modifications

---

ADOPTED BY  
THE TRIAL COURT FACILITY  
MODIFICATION WORKING GROUP,  
MARCH 29, 2010

ADMINISTRATIVE OFFICE  
OF THE COURTS

---

OFFICE OF COURT CONSTRUCTION  
AND MANAGEMENT

This document presents a methodology and process adopted by the Trial Court Facility Modification Working Group (Working Group) for prioritizing and ranking modifications to trial court facilities. It also includes operating guidelines established to help guide Working Group meetings and to establish AOC versus court funding for a variety of facility related issues.

### Facility Modification Defined

Facility Modifications (FM) as defined by the Judicial Council in its [December 2, 2005 Report on Facility Modifications Prioritization \(Judicial Council Report\)](#) are a generally planned, *physical modification* to a facility component or components that restores or improves the designed level of function of a facility or facility components.

There is no upper or lower dollar limit for FM. Small repairs will normally be handled as Job Orders but depending on the operations and maintenance budget, some smaller repairs either individually or collectively may need to be funded as FMs. Larger projects may be funded as Capital Projects.

FMs are *distinguished from major capital outlay projects* in that the latter significantly increases the facility's gross area, as in an addition to a structure; substantially renovate a major portion of the facility; comprise a new facility or an acquisition; or change the use of the facility, as in a conversion from another use to court use.

### Priority Categories

Facility modifications are assigned one of six priority categories. These categories, adopted by the Judicial Council Report, are based on methods commonly used by private sector facility management firms. Facility modifications that are determined to be priority 1 will be addressed immediately and regardless of whether the court occupies a shared-use facility. Planned priority 2–6 facility modifications requested for court exclusive and shared-use facilities will be assigned an appropriate priority category. Implementation of modifications in shared-use facilities, however, may be dependent on financial participation by the county that occupies space in the building.

**Priority 1—Immediately or Potentially Critical.** Condition requires immediate action to return a facility to normal operations, or a condition that will become immediately critical if not corrected expeditiously. Such conditions necessitate the need to stop accelerated deterioration or damage, to correct a safety hazard that imminently threatens loss of life or serious injury to the public or court employees, or to remediate intermittent function and service interruptions as well as potential safety hazards. Such conditions may include, but are not limited to, the following: major flooding; substantial damage to roofs or other structural building components; or hazardous material exposure. Depending on scope and impact, a severe deterioration in

life safety protection may also be considered a priority 1 condition requiring a facility modification.

Owing to their critical nature, priority 1 requests will be addressed immediately by AOC staff using internal procedures that ensure timely and effective responses to unplanned emergency or potentially critical conditions, including a method and a process for setting aside funds to address priority 1 conditions.

**Priority 2—Necessary, but Not Yet Critical.** Condition requires correction to preclude deterioration, potential loss of function or service, or associated damage or higher costs if correction is further deferred.

**Priority 3—Recommended.** Condition to be addressed will reduce long-term maintenance or repair costs or will improve the functionality, usability, and accessibility of a court. The condition is not hindering the most basic functions of a facility, but its correction will support improved court operations.

**Priority 4—Does Not Meet Current Codes or Standards.** Condition does not conform to current code requirements, yet it complied at the time of initial construction. Such conditions are considered legally nonconforming and are generally not required to be modified to meet current code requirements.

**Priority 5—Beyond Rated Life, but Serviceable.** Condition is currently adequate but cannot be expected to function as designed in the future.

**Priority 6—Hazardous Materials, Managed but Not Abated.** Hazardous materials, such as asbestos or lead-based paints, which are currently managed in place but not yet remediated.

### **Ranking Requests for Priority 2–6 Facility Modifications**

Executives of the State’s trial courts will be surveyed annually by AOC staff to document the court’s operational needs, and facility conditions will be assessed by staff and contractors periodically, to identify facility modification requests and requirements for each forthcoming fiscal year. AOC staff will assign a priority category to each modification requested or indicated, develop a preliminary cost estimate, and determine a high-level scope of work for the modification. AOC staff will then prepare a report on pending trial court facility modifications. Each report will include a preliminary ranked list of all pending requests by priority category, including a quantitatively-scored rationale for the ranking. Preliminary ranked lists of all modification requests will be prepared by AOC staff based on the following criteria from the December 2, 2005 Report to Judicial Council on facility modifications:

- priority category

- specific justifications
- effect on court operations, and public and employee safety
- risk management and mitigation
- funding availability
- equity among the courts
- implementation feasibility
- cost/benefit analysis
- design and plan status
- planned major capital improvements

The **Priority Category** will be used to create the initial ranking of facility modifications. By assigning point values to the criteria listed above, a score is produced to rank the facility modifications within each priority category. The proposed scoring methodology follows:

**Justification and Effect on the Court:** This will be a score of between 5 and 50 (with 5 being the court being closed or being significantly impacted and a 50 being a wish list item). *Please note that any number in between 5 and 50 can be used to quantify the justification and the effect this requirement has on the court.* The chart below will assist in determining the correct number.

5	court operations are <i>significantly</i> impacted (negatively)
20	court is operating but at less than standard productivity
35	court appearance and dignity is diminished by the condition of the facility
50	a “wish list” item

**Safety, Security, Risk Management:** This score works the same way as the *Justification and Effect on the Court* scoring. The focus here is not so much on court operations but on safety, security, and risk management. *Please note that any number in between 5 and 25 can be used to quantify the justification and the effect this requirement has on the court.* The chart below will assist in determining the correct number.

5	potential serious risk
20	no significant risk
25	no risk

**Equity among Courts:** This score is used to help ensure that all courts scheduled to transfer obtain at least some FM funding.\*

0	If Priority 2
5	If Court’s highest priority is between 3 and 6
10	Court’s second highest priority
15	Court’s third highest priority
30	All other FMs for the Court

\*For each full calendar year that the project has been on the list, subtract 5 points (to a minimum score of 10 points).

**Feasibility:** This score helps rank the easy to implement jobs higher than complex ones.

- 10 Easy to perform with little or no planning or design
- 15 Requires some planning and design
- 20 Requires major design effort
- 25 Requires major design effort and may not be practical

**Cost/Benefit:** This criterion allows for FMs that will pay back the cost of the effort over shorter time frames to move up the list by using a negative score. An energy-saving improvement yielding reduced utility bills or an automation project resulting in a demonstrable reduction in labor expenses are good examples. Only facility modifications with a documented cost savings and a payback of less than five years will be considered in criterion.

- 10 Cost pay back of less than 5 years

**Design Status:** FMs which require no design effort, or are already in design, will receive higher scores than those still requiring design effort.

- 5 Designed, ready to perform
- 15 Designs will be ready within 90 days
- 25 Designs will take more than 90 days to complete

The final criteria, **Planned Major Capital Improvements** will utilize a yes/no test for *implementation* of a facility modification project, though this will not affect the ranking of those facility modification requests or needs. In some cases, a facility modification may be implemented even though a major capital project that would address the need is being planned but, for example, has not yet been funded. On the other hand, if a planned major capital improvement will address the facility modification need in a reasonable period of time, the request may not need to be implemented. A specific funding guideline is included in Attachment 1 as Guideline 9.

## Budget Allocation

The AOC-produced report will be presented to the Trial Court Facility Modification Working Group in advance of each budget year cycle. The Working Group will also consider a proposal by AOC staff to allocate the forthcoming fiscal year's facility modifications budget among four categories:

1. Priority 1 facility modifications (not subject to ranking)
2. Planned Priority 2-6 facility modifications (represented in the report)
3. Unforeseen and out-of-cycle Priority 2-6 facility modifications (addressed below)
4. Statewide Facility Modification Planning

The methodology and process used to produce the ranked report and proposed budget allocation will be reviewed with the Working Group to evaluate the approach and answer any questions. The Working Group will have the opportunity to modify the prioritization ranking methodology, adjust the allocation of the facility modifications budget among the four categories, make other changes as necessary, or validate the methodology adopted and budget allocation proposed by AOC staff.

In the event a facility modification can be performed using funds from sources other than the facility modifications budget, implementation without regard to the prioritization and ranking methodology may be considered by the Working Group. An example would be the provision of grant funds for the purchase and installation of security equipment. If facility modification funds were required to complete the installation of any equipment, provided it was a Priority 1 modification, the installation would still be eligible to proceed without ranking. If the modification was classified as a Priority 2 or higher, it would be subject to the ranking methodology.

Following review by the Working Group, the report will be made available for court comment by posting to Serranus. All comments will be considered and addressed by the Working Group. All comments and Working Group responses will be presented to the Executive and Planning Committee of the Judicial Council of California (E&P), as part of the final report of the Working Group. The E&P will then consider the report and budget proposal for approval.

The Facility Modifications List approved by the E&P will be the basis on which the AOC will proceed to implement facility modifications. AOC staff will manage the work from design through construction, inspection, and acceptance. The AOC will work collaboratively with local courts to implement all facility modifications.

Based on changes to the pace of certain facility transfers from county to state jurisdiction and the development of new conditions and needs among the court facilities, the Working Group will meet on an every other month basis to review unforeseen and out-of-cycle requests for Priority 2-6 facility modifications. The Working Group will have the authority to approve adjustments to the E&P approved report and, as necessary, reallocate funds among the facility modifications budget categories.

The Work Group's decision are normally implemented by the AOC without further consideration or approval. Reconsideration of decisions made by the Working Group will only be reviewed in accordance with Guideline 11 located at Appendix 1.

## **AOC VERSUS COURT FUNDING**

Not all request for facility related services are funded though the AOC facility modification budget. Some items such as furniture are expressly excluded while others such as painting and floor covering are only funded under certain circumstances. To help establish a predictable outcome when requesting facility work the Working Group has established a number of Guidelines cover a variety of areas.

The full text of the guidelines are included as Attachment 1. The guideline cover the following topical areas:

1. Paint/Wall Covering and Window Covering
2. Floor Covering
3. Special Purpose HVAC
4. Security Related Projects
5. Hazardous Material Management and Disposal
6. Patron Seating
7. Installation and Support of Court Owned Equipment/Furniture
8. Art, Interior Decorations, Special Purpose Decorations
9. Facility Modifications in Facilities to be Replaced with Funded Capital Projects
10. Funding of Facility Modifications in Court Funded Leased Facilities
11. Request for reconsideration of Working Group Decisions

The Working Group may establish additional Guidelines or modify existing guidelines as necessary to achieve the goal of the Council, consistent with budget restraints.

### **Working Group Meeting Protocols and Other Guidance**

**Cost as a Prioritizing and Ranking Factor:** The cost of a FM will not be a factor when prioritizing and ranking FMs.

**\$15/5 Rule:** FMs with a Priority 2 or 3 and a cost of less than \$15K, and FMs with a Priority of 4 or 5 with a cost of less than \$5K can be approved and funded by the OCCM staff without first going through the Working Group. All such FMs will be reported to the Working Group at the next meeting and will be funded using Out of Cycle funds. \$15/5 Rule FMs will be limited to \$100,000 for each 100,000 SF of space per facility annually. For example, a 80,000 SF facility is limited to \$100,000 and a 120,000 SF facility is limited to \$200,000.

**Facility Modification Cost Increases:** FM cost increases do not have to be approved by the Working Group in advance. Cost increases of more than \$50K over that initially approved by the Working Group will be reported at the next meeting.

**Meeting Materials:** Meeting materials to include an Executive Summary, cumulative list of policy decisions, slides, and spreadsheets should be sent out two weeks prior to the meeting. The slides should be sent in black and white and as three to a page handouts.

**Members Absences:** In the event a member cannot attend, they cannot have someone else represent them at the meeting. A quorum will consist of the member present for a scheduled meeting. OCCM will contact each member who is not able to attend and brief them on the discussions and decision of the Working Group.

**Attachment 1  
Guidelines**

**Guideline 1  
Paint/Wall Covering and Window Covering Guidelines**

The AOC has the responsibility for the interior painting and maintenance of wall/window coverings. Rule 10.810 allows the courts to use their operating funds for painting and wall/window coverings, but does not require them to fund the maintenance to an AOC standard. Thus if the court is not willing or able to fund this to meet the AOC standard of finish and appearance the AOC as the building owner must provide necessary funding

This guideline does not apply to art work such as murals, paintings, or other non-standard wall covering that is intended as decorative items, not simple wall paper or cloth coverings. It also does not apply to wall finishes that are a part of a larger renovation or remodeling project.

Use the following to guide when the AOC will fund and what priority painting and wall/window covering request should receive.

Priority 1: Only when done as part of a larger Priority 1 FM that would require painting to complete the repair. Example; If a water leak resulted in replacement of sheetrock, painting to match the preexisting color would be included in the repair effort.

Priority 2: Only used for vandalism/graffiti cover up or to repair damage, in public areas, that must be repair immediately to prevent further deterioration of wall coverings. Priority 2 work should be limited to the minimum effort needed to address the immediate concern (corner to corner painting versus whole room). Priority 2 work will normally be limited to a Job Order scope.

Priority 3: Use when excessive wear does not justify a Priority 2 but impacts the dignity of the court to a level that its correction will improve court operations and provide minimal maintenance standards. E.G.: Repainting and wall covering repairs in public common areas and courtrooms where the wear/damage indicate a total lack of concern for basic maintenance standards. This is often in the eye of the beholder but should not include work that covers *normal wear and tear*. Priority 3 work should be limited to the minimum effort needed to address the immediate concern (corner to corner painting versus whole room). Priority 3 work can often be limited a Job Order scope.

Priority 4: Only used where painting is required for code compliance.

Priority 5: Most painting and wall/window covering replacement will fall into this priority. The AOC will over time develop a cyclical painting program that will set standards for desirable painting cycles. Due to the limited funding for this priority, courts should be encouraged to budget for recurring painting and wall covering replacement.

## **Attachment B**

Priority 6: Only used to provide repairs/covering after the removal of manage but not abated hazardous materials.

## **Guideline 2**

### **Flooring Guidelines**

The AOC has the responsibility for maintenance of flooring. Rule 10.810 allows the courts to use their operating funds for flooring, but does not require them to fund the maintenance to an AOC standard. Thus if the court is not willing or able to fund this to meet the AOC standard of finish and appearance the AOC as the building owner must provide necessary funding for flooring.

Use the following to guide when the AOC will fund and what priority flooring request should receive.

Priority 1: Only used when there is a complete collapse of the subflooring that results in damage to the floor finishing or when done as part of a larger Priority 1 FM that would require flooring repairs/replacement to complete the repair. Example; If a water leak resulted in molding carpeting, replacing the carpet to match the preexisting carpet would be included in the repair effort..

Priority 2: Only used for significant safety hazards, i.e. tripping hazards. Before flooring replacement is approved repairs of the existing flooring should be attempted. Only when repairs are not practical or cost efficient should total area flooring be replaced. Even then it should normally be limited to the room/area and not extended to the entire floor or department.

Priority 3: Use when excessive wear does not justify a Priority 2 but impacts the dignity of the court to a level that its correction will improve court operations and provide minimal maintenance standards. E.G.: Repairs in public common areas and courtrooms where the wear/damage indicates a total lack of concern for basic maintenance standards. This is often in the eye of the beholder but should not include work that covers *normal wear and tear or aging*. Priority 3 work should be limited to the minimum effort needed to address the immediate concern (single room versus whole floor).

Priority 4: Only used where flooring repairs/replacement is required for code compliance.

Priority 5: Most flooring replacement will fall into this priority. Due to the limited funding for this priority, courts should be encouraged to budget for normal life cycle flooring replacement.

Priority 6: Only used to provide repairs/replacement after the removal of manage but not abated hazardous materials.

### **Guideline 3**

## **Special Purpose HVAC Guidelines**

Special Purpose HVAC is any system or portion of a system that is not necessary for people comfort but is needed to control the temperature or humidity for equipment or items being stored and/or backup units to supplement the building system for these types of requirements. Examples of this would be computer room HVAC units, HVAC systems for evidence storage rooms/units, built in or stand alone refrigerators, and other such systems.

The determination of what specialty HVAC equipment is part of the courts equipment and what is a part of the facility is often a very fine line. Refrigerators, freezers, and other such stand alone appliance used for court employees or even for evidence storage are clearly court equipment and the responsibility of the court. Responsibility for computer room HVAC whether a computer rack air conditioner (CRAC) or a whole room system is less clear. Due to the nature of this equipment and the fact that it is often tied to the building HVAC either through shared ducting, chilled water, etc; it is normally treated as part of the facility.

It is imperative on the courts that they consult with the AOC anytime the heat load is going to change for this type of equipment. Adding new computers, removal of computers, and adding staff into a computer room will all have an impact on these standalone/back up units. Failure to plan with the AOC facility staff could result in delays in changes to the HVAC equipment and thus the ability to support the heat load.

Prioritization of work related to this type of equipment should follow the normal prioritization process and consideration.

## **Guideline 4**

### **Security Related Projects Guidelines**

The determination of what specialty security projects are part of the courts equipment and what is a part of the facility as a whole is often a very fine line. Metal detectors, scanning equipment, and other such stand alone plugged in equipment used by court employees, sheriff or contractors are clearly court equipment and the responsibility of the court. Exterior security lighting, making accessible entry areas that can house security equipment, perimeter alarms, normal exterior locks and hardware, and holding cells are all clearly part of the facility and thus an AOC responsibility. Responsibility for cameras, interior locks, and other security related but attached equipment is less clear.

To determine funding responsibility the following criteria should be considered:

The AOC funds:

- permanent changes to the facility and accessibility
- permanent changes to fixed counters and access areas
- exterior security to include lighting, and alarms
- repair and maintenance of “transferred” holding cells
- installation and maintenance of AOC recommended camera systems
- all locks and hardware permanently install as part of the building
- all attached security equipment found in a typical office building

The Courts fund

- all security related personnel cost and portable equipment
- all furniture and removable locks
- the replacement of all keys/cards lost by court personnel
- all security related equipment not be found in the typical office building unless identified as not court allowable per Rule 10.810

It is imperative on the courts that they consult with the AOC anytime they are planning to added, change, or remove security equipment, or change security procedures that could have a facilities impact. Adding new equipment, removal of equipment, and changing the entry locations for either court staff or the public could all have an impact on the facility. Failure to plan with the AOC facility staff could result in delays in changes necessary to support the new security requirements.

Prioritization of work related to these types of projects should follow the normal prioritization process and consideration. All security related project must be coordinate with Emergency Response and Security (ERS). All justification and related scoring for these projects should be confirmed by ERS as being valid requirements and not outside the scope of normal AOC standards.

## **Guideline 5**

### **Hazardous Waste Management and Disposal Guidelines**

Hazardous waste includes a wide range of materials and substances ranging from small disposable batteries to substances such as asbestos and polychlorinated biphenyl (PCB). Because of this wide range of materials a simple guideline is difficult to develop that will clearly cover every possible situations. For the purpose of this guideline, hazardous waste is divided into three groupings based on who uses or generates the waste. The three groups are court generated, janitorial related materials, and building materials. Management and disposal of generated waste must comply with all environmental regulations governing the packing, containment and disposal of hazardous waste regardless of who is responsible.

Court generated materials include all items that are not janitorial related or a part of the building construction or its equipment. Examples include toner cartridges, batteries, court owned equipment such as computer equipment containing heavy metals or equipment with refrigerant containing devices, and items stored in an evidence room.

Janitorial related materials include all cleaning material such as detergents and solvents, as well as, any waste generated as a result of cleaning such as greasy rags or waste water containing hazardous material. Management and disposal of janitorial materials and generated waste is the responsibility of the court through their janitorial service and must comply with all environmental regulations governing the packing, containment and disposal of hazardous waste.

Building generated hazardous material covers the vast majority of hazardous material in the facilities. It includes building construction materials like asbestos and lead based paints, and hazardous material contained in building equipment like PBCs and various fluids. All waste generated as a result of maintenance and repairs such as paints, oily rags, acid batteries, etc. fall in this category. The appropriate packing, containment, and disposal of all building generated hazardous material are the responsibility of the AOC and due to the cost of disposal is routinely a FM.

[NOTE: The one exception to this would be when a court funded project impacts the hazardous material. For example, in a court funded renovation the court assumes all responsibility and cost for the protection of the building occupants and property, as well as, the cost associated with the proper packing, containment, and disposal of all materials removed during demolition and material left over at the end of the project.]

Some items are more difficult to clearly identify into one category or the other. One of these is human waste in its various forms to include blood and feces. While normally this type of waste is a janitorial issue, there are occasion when the quantity or location of the waste make it beyond the capability of a normal janitorial function. For example cleanup after a violent assault which leaves blood on the carpeting or walls or a major sewage line break that deposit large amounts of human waste into either the building or the grounds. Both examples shift responsibility for the containment and disposal of the hazardous waste from part the normal janitorial function to a larger facility management issue. This becomes an AOC

responsibility and likely will be part of the larger FM needed to restore the facility to it normal functionality.

Prioritization of work related to these types of efforts should follow the normal prioritization process and consideration. In many cases the disposal of hazardous waste is not the sole purpose of the effort and is simply an additional task related to a larger project.

## **Guideline 6**

### **Patron Seating Guidelines**

Patron seating is considered any seating that is not normal court employee seating and is not seating around a table. This includes all public seating in court rooms, public hallway, waiting areas, jury assembly rooms, and other public access areas.

This seating is normally multi-person seating such as benches, pews, and other gang seating, and individual seating that is by design attached to the facility such as chairs that are bolted to the floor. The exception to this is couches and similar types of multi-person seating that is normally seen as stand alone furniture and not normally bolted in place.

Court Employee seating, seating around a table, and couches are considered as furniture. Furniture is a court funding responsibility.

As an example in the courtroom, the audience seating and jury seating would be an AOC responsibility while the court employee seating and the litigate seating would be a court responsibility. All seating in the jury assembly area, except for employee seating and couch type seating, would be an AOC responsibly. Chairs in a jury deliberation room would be furniture and thus a court responsibly.

Prioritization of work related to fixture seating should follow the normal prioritization process and consideration.

## **Guideline 7**

### **Installation and Support for Court Owned Equipment/Furniture Guidelines**

Court owned equipment and furniture cover a very broad range of items ranging from small white boards up to large computer racks, and includes all furniture items that are not built into the building. For the purpose of this guideline these items are broken into three categories; furniture, equipment, and electronic equipment to include all communications and audio/visual equipment.

Furniture is normally a court funding responsibility. The exceptions are when the furniture is built into the building and not simply attached. A good example of this is the judge's bench and public service counter. This applies even if these benches and counters are made of modular furniture construction. Built-in bookcases and service counters are other good example of items that the AOC will maintain.

Equipment includes all items that are not building systems. They could be stand-alone, attached or built-in. This covers a wide range of items including but not limited to items such as white boards, clocks, file storage systems, portable/movable electronic equipment, court owned appliances, electronic calendars, and display boards. The cost of this equipment and the cost to move, mount, or install this equipment is the sole responsibility of the court. If additional 110/220v standard electrical outlets that could be used for other purposes are needed to support portable equipment, the outlet will be installed at the AOC cost.

The installation or removal of built in equipment must be coordinated with the AOC. Installation and removal of such items often result in damage or changes to the facility. For example, the installation of built-in electronic calendars requires the cutting into wall finishes, and the additional electrical load. Removing them will require the wall finishes being repair. The AOC can provide these service at the court's expense or the court can contract the services themselves but must have the plans/designs approved by the AOC in advance.

Communications and audio/visual equipment is the responsibility of the court. The AOC's only cost related to this type of equipment would be to provide adequate power as needed. This could be as simple as adding an outlet or bringing a whole new electrical panel in for a new set of communication routing switches. During equipment failures the AOC will check and confirm that adequate power is going to the equipment, any additional support will be at the court's expense.

Prioritization of work related to equipment should follow the normal prioritization process and consideration.

## **Guideline 8**

### **Art, Interior Decorations, Special Purpose Decorations Guidelines**

Artwork can take many forms. Some art is purely decorative in nature such as paintings; other artwork is both decorative and functional such as seating walls, planting areas, and decorative flooring and wall covering. This guideline applies to both types of artwork.

Artwork, interior decorations and special purpose decorations are the responsibility of the court and not the AOC. Any of these types of items that were transferred to the AOC as part of the SB 1732 transfer process become the property of the AOC unless ownership is assumed by the court. If the court does not take ownership of the property the AOC at its discretion can remove, change, or maintain the artwork or decorations.

The court is responsible for those items simply hung on the walls or sitting in the facility. This would include most framed paintings, plants not part of a built-in atrium or similar structure, movable or temporary displays, temporary decorations such as holiday decorations and community displays. These items are considered the property of the court or employees working in the facility.

Some facilities have artwork on loan or maintained by local organizations such as historical societies or the artist. Both the AOC and the court must work closely with such organizations or owners to ensure artwork is properly maintained. If the owner or responsible organization request assistance in the maintenance and/or movement of the artwork the AOC will provide support in accordance with any established agreements with the artist or local organization. In the event no established agreement exists, the AOC will at its discretion may assist or determine that the requested assistance is not in the interest of the AOC and thus decline to provide the support without reimbursement of cost.

## Guideline 9

### Facility Modifications in Facilities to be Replaced with Funded Capital Projects

The use of Facility Modification funds in facilities with funded Capital Project that will result in the courts vacating the existing facility need to be carefully scrutinized. Since the time from funding of a Capital Project to move in is often five or more years, it is unreasonable to say that no FM funding will be permitted. The challenge is to fund those FMs that are critical to continue the operations of the facility and prevent excessive deterioration but are cost proportionate to the amount of time the court will remain in the facility. The following guidelines should be used in making funding decisions:

1. FM's that are critical to continue the normal operations of the facility should be funded.
2. Fire, life, safety and security issues normally will be funded.
3. When the cost of maintenance or operations due to failing systems is determined to exceed the cost of repair work to fix said failed system. For example: the impact to operations and cost of deterioration to the facility due to leaks may justify the replacement of a roof even though the roof will last for 20 years when the Courts are scheduled to leave after 5 years.
4. The AOC will take the limited life for the facility into consideration when determining the necessary FM actions needed.

FMs to enhance court operations, improve the appearance of the facility, and other items not required to maintain the existing operations must be evaluated on a cost versus years of service remaining. Items having short life cycles such as painting may be justified if the facility still has three or more years of court usage. Some items are required to maintain the dignity of the court. Generally, the following formula should be used as a guide to determine the amount to be spent on the above type items.

Number of years of remaining usage ***multiplied by*** the square foot of court space  
***divided by 10 equals*** \$ to be spend in any fiscal year.

Using this formula a facility with five years of remaining court usage with 50,000 square feet could have approximately \$25,000 of FMs to enhance court operations and improve the appearance of the facility. While a similar sized facility with only two years of usage would have \$10,000.

All requests beyond the scope of the formula will be highlighted to the TCFMWG.

Courts may at their discretion fund additional enhancement or improvements to the facility, but AOC and court funding should not be combined for a single project.

Additionally FM funds will not be used to supplement or reimburse costs relating to a Capital Project: this includes contributing FM funds to a Capital Project, reimbursing the AOC for cost overruns or Court for work performed as part of a Capital Project. This fund exclusion does not extend to work after the completion of a Capital Project to enhance operations, improve the

## **Attachment B**

maintainability of the facility, or maintain the facility after expiration of warranties. In Capital Projects that occur in an existing facility, this exclusion does not pertain to repair or maintenance of items outside the scope of the Capital Project.

## **Guideline 10**

### **Funding of FMs in Court Funded Leased Facilities**

This guideline applies to all leases managed by the AOC but funded by the courts. This could include leases for new judgeships, storage, or for any of a number of court-supported programs for which the local court pays the lease costs.

Most court-funded leases are like the majority of leases managed by the AOC, in that the lessee provides the majority of the facility maintenance needs. This routinely includes many items that would be FMs if done in an AOC own facility. Normally these costs are included in the lease and no additional funding is required.

In some cases, there may be items that are not included in the lease cost that may fall into the category of FM. The TCFMWG will consider funding such items using the same prioritization and scoring methodology as with any FM. If funded the AOC will work with the lessee to determine how the work will be performed.

FM funding will not be used for any of the following:

- To increase leased space

- To change the basic function of the space, e.g. turn warehouse space into a courtroom or office space

- To pay for work that is the responsibility of the lessee

- To pay for any cost that is amortized over the course of the lease or is a part of the operational expenses paid on a recurring basis.

- To pay for initial Tenant Improvements. FM funding will only be considered after the court has occupied the space for six months or more.

- To pay for any cost related to storage space.

## **Guideline 11**

### **Requests for Reconsideration of TCFMWG Decisions**

Courts and the AOC may request decision made by the TCFMWG be reconsidered. Such requests could address funding, prioritization, or scoring decisions. All such requests must be in writing and signed by the Presiding Judge or Court Executive Officer or if from the AOC, the Director of the Office of Court Construction and Management (OCCM). Request for reconsideration should be submitted to the Facility Operations Manager of OCCM.

The Facility Operations Manager will forward the request to the Chair of the TCFMWG along with a summary of the request and the decision made by the TCFMWG.

The Group will review the request for reconsideration, the initial decision of the group, and any other pertinent information related to the request. The Group or a member, may based on the situation visit the facility, meet with court and/or AOC personnel, or meet with any other person(s) who may provide information on the request.

The group will then review all the data and the report from the appointed member and make a final determination. The Chair will prepare a reply informing the requestor of the decision of the group.

The decision of the group is considered final.

ADMINISTRATIVE OFFICE  
OF THE COURTS

OFFICE OF COURT CONSTRUCTION  
AND MANAGEMENT

Prioritized List of Facility Modifications, Priorities 2-6

FM Number	County	Bldg ID	Building	Priority	Description	Preliminary Cost Estimate	On Hold?	AOC % of Cost
1 FM-0034462	San Francisco	38-A1	Civic Center Courthouse	2	Security - Department 103 Door, One, Repair Door Hinge as Door Hinge Support is Broken and Door Does Not Close or Lock	\$2,500	No	100.00
2 FM-0034603	San Luis Obispo	40-A1	Courthouse Annex	2	Security - Replace Rolling Door Barrel Spring on Sally Port Door	\$2,840	No	49.74
