1.0 Executive Summary

1.1 Purpose

The purpose of this document is to provide integration partners with descriptive information regarding the context and business processes when preparing to implement data exchanges with the California Court Case Management System (CCMS). This document details the exchange content requirements and related business requirements needed for the trial court to send a notification to the county sheriff that a defendant must be booked, when this action is ordered by the trial court.

Integration partners most likely to use this data exchange include:

- County jails
- Department of Justice
- Law enforcement agencies/sheriffs

This document reflects agency business rules and policies that have a direct impact on the system interactions among court and integration partners. This is a companion to the exchange specifications contained in the exchange eXtensible Markup Language (XML) schemas, Web Service Description Language (WSDL) files, and the “*CCMS Data Exchange Common Technical Requirements*,” and should be reviewed along with those documents when preparing for deployment. The XML schemas, WSDLs, and Common Technical Requirements provide specific technical details regarding message structures and implementation requirements, including infrastructure, security, and deployment information. Collectively, these documents provide all of the information an integration partners requires to send and receive data with CCMS for this exchange.

The information contained here compiles court-specific information from a number of AOC documents and resources, including the “*CCMS Data Exchange Functional Design*,” “*CCMS Core Application Functionality*,” and the “*CCMS Technical Architecture*.” The content of this Service Description Document provides integration partners with a concise, detailed explanation of data exchange content and related business processes, and includes the following topics:

- Exchange description
- Events and conditions
- CCMS business processes and rules
- CCMS data requirements
- Message patterns
- Exceptions, acknowledgements, errors
- Other descriptive information

This document is based on the [Global Justice Reference Architecture's Service Specifications Guidelines](#)¹.

Prior to implementing data exchanges with CCMS, it is strongly advised that each integration partner participate in a readiness assessment prepared by the AOC in partnership with the courts. This assessment, called the “*Local Integration Assessment Methodology (LIAM)*,” consists of four phases that provide integration partners and the courts with necessary information prior to implementation activities. Figure 1 describes this process in more detail.

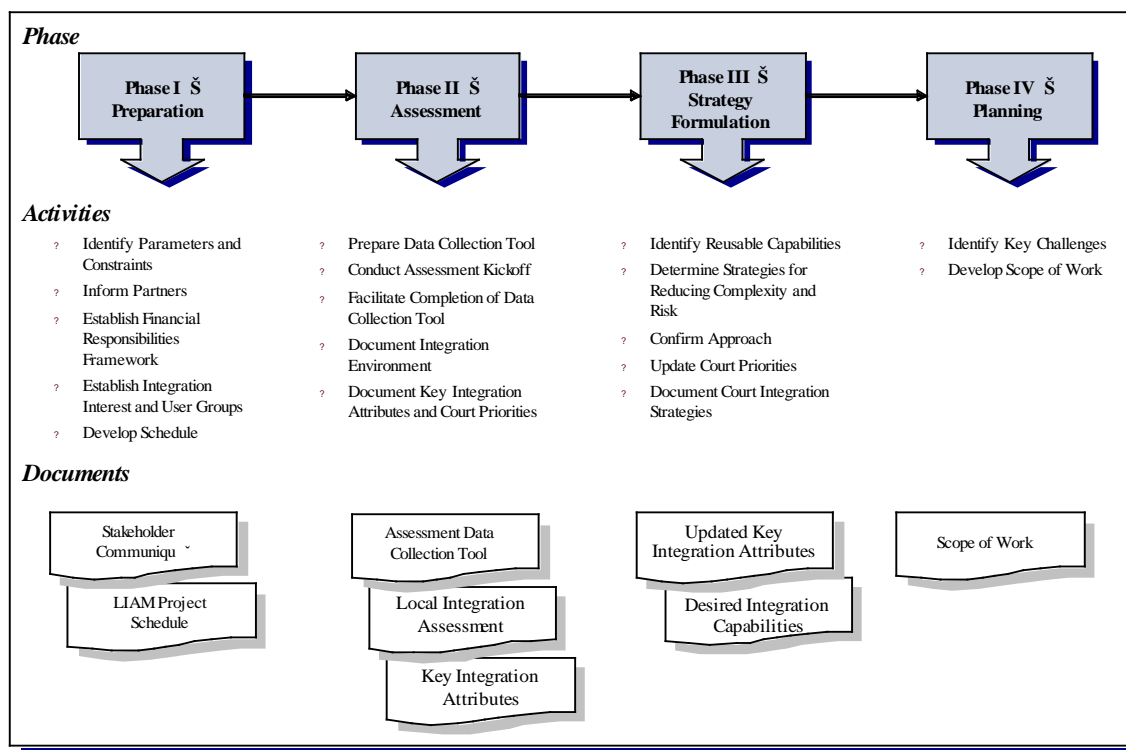

Figure 1. Implementation Phases

Alternatively, an integration partner can choose to participate in the “*LIAM Light*” assessment, which focuses on replacing existing electronic exchanges instead of automating new exchanges.

After CCMS is deployed with the replaced existing exchanges, integration partners may want to use the full LIAM to assess other business processes that can be automated using other exchanges.

¹ <http://www.it.ojp.gov/default.aspx?area=nationalInitiatives&page=1015#RefSSPs>

1.2 Audience

Audiences for this document are subject matter experts (SMEs) and technical staff, who need to understand how this data exchange works in order to implement it between an integration partner and CCMS. Known audiences include:

- Integration partner CCMS Data Exchange Implementation Team
- CCMS Deployment Team
- AOC Data Integration staff, including business analysts, developers, and architects, etc.
- Integrated Services Backbone (ISB) vendors
- CCMS vendors
- Court CCMS project managers and SMEs

1.3 CCMS Data Exchange Overview

As part of the CCMS project, 121 data exchanges servicing all case types were developed to enable courts and their integration partners to exchange information using CCMS. Sixty-three exchanges are based on data exchange standards established in the [National Information Exchange Model](#)² (NIEM), and 58 exchanges are based on California judicial branch XML schema. It is important to note that each of the 121 exchanges is actually a set of exchanges that includes individual exchanges for Request, Response, and Error Handling. A complete list of CCMS data exchanges is available on the [Integration Partners website](#)³.

1.4 Assumptions

Following is a list of current assumptions:

- Integration partners and courts have completed their LIAM process as a prerequisite to implementing data exchanges.
- Integration partners have a working proficiency with Web services and XML, and a basic understanding and knowledge of the NIEM structure and implementation concepts.

1.5 Risks

To date, there are no risks identified for this exchange.

² <http://niem.gov/>

³ <http://www.courts.ca.gov/partners/482.htm>

1.6 Conventions Used in this Document

1.6.1 Exchange naming convention

During the data exchange development process, the AOC adopted a standard naming convention to describe the “action” of the exchange from the court perspective, and applied an alphanumeric categorization for various court functions. Each follows this format:

<Application>-<Interface Number><Interface Name>

Where

- Application is CCMS
- Interface Number consists of code name of functional area (two or three letters (e.g., “DOJ” for Department of Justice-related data exchanges)), and a three-digit number:
 - If the first digit is “8” then CCMS is receiving the data from an integration partner.
 - If the first digit is “9” then CCMS is sending the data to an integration partner.
 - The remaining two digits identify the unique integer ID sequentially assigned to the data exchange.
- *Interface Name* is descriptive name of the data exchange.

Examples:

- CCMS-V4-DOJ802 Receive Disposition Error Report Notification
 - CCMS receives data from an integration partner.
- CCMS-V4-DOJ901 Send Initial, Subsequent Disposition Notification
 - CCMS sends data to an integration partner.

2.0 Exchange Description

This section outlines the requirements and functional design for the CAS905 Send Booking Required Notification data exchange. A trial court uses this NIEM-based data exchange to send a notification to the county sheriff that a defendant must be booked, when a trial court orders this action.

The success response to this data exchange is returned from the county sheriff indicating that the defendant has been booked; it includes the defendant booking information (e.g., CCMS case number, participant, and booking processed indicator). If an error is encountered, the error response informs the court that corrective action is required.

2.1 Capabilities

This service provides the ability for a trial court (service consumer) to **send** a notification to a county sheriff (service provider) that a defendant must be booked, when this action is ordered by the trial court.

2.2 Real World Effects

This service provides the ability for a county sheriff (service provider) to **receive** a notification from the trial court (service consumer) that a defendant must be booked, when a trial court orders the booking.

2.3 Related Forms and Exchanges

2.3.1 Business response exchanges

All exchanges subject to a court clerk review have corresponding business response exchanges that describe the outcome of the court clerk's review. This data exchange is not subject to a clerk review; consequently there are no business responses for this data exchange.

2.3.2 Related exchanges

Related exchanges identify associated exchanges integration partners may use to modify, update, or complete a correlated business process.

- There are no related exchanges.

2.3.3 Related forms

“Related forms” refers to forms, reports, or other documents currently used by courts and integration partners for the types of documents that may be included in this data exchange. This list is not exhaustive and is not an authoritative list of documents replaced by the data exchange; it is only for informational purposes.

- There are no related forms.

2.4 Assumptions and Dependencies

The data exchange specification package includes a data mapping specification based on the NIEM- and CCMS-specific definitions used in this exchange. Each integration partner is responsible for mapping, or performing data translations if necessary, for all content (including coded values) sent and received using this exchange.

3.0 Primary and Alternate Information Flows

This section provides a basic description of the exchange sequence and flow between an integration partner and CCMS. It explains the primary scenario for successful delivery and receipt of data exchange content, and alternate flow of information for error and exception handling scenarios. Additional diagrams and descriptions of information flows are found in the “*Data Exchange Functional Guidelines*.”

3.1 Primary Flow

1. CCMS sends a booking required notification to the ISB.
2. The ISB receives the notification, performs schema validation, facilitates data mapping to the NIEM standard, and forwards the notification to the county sheriff.
3. The integration partner receives the message and performs business validations on the data exchange per the rules outlined in [Section 6.0, Additional Business Rules and Processes](#).
4. The integration partner sends the success or failure response to the ISB.
5. The ISB receives the response, facilitates data mapping to the California judicial branch XML schema standard, and forwards the county sheriff’s response to CCMS.
6. CCMS receives the response and takes appropriate action.

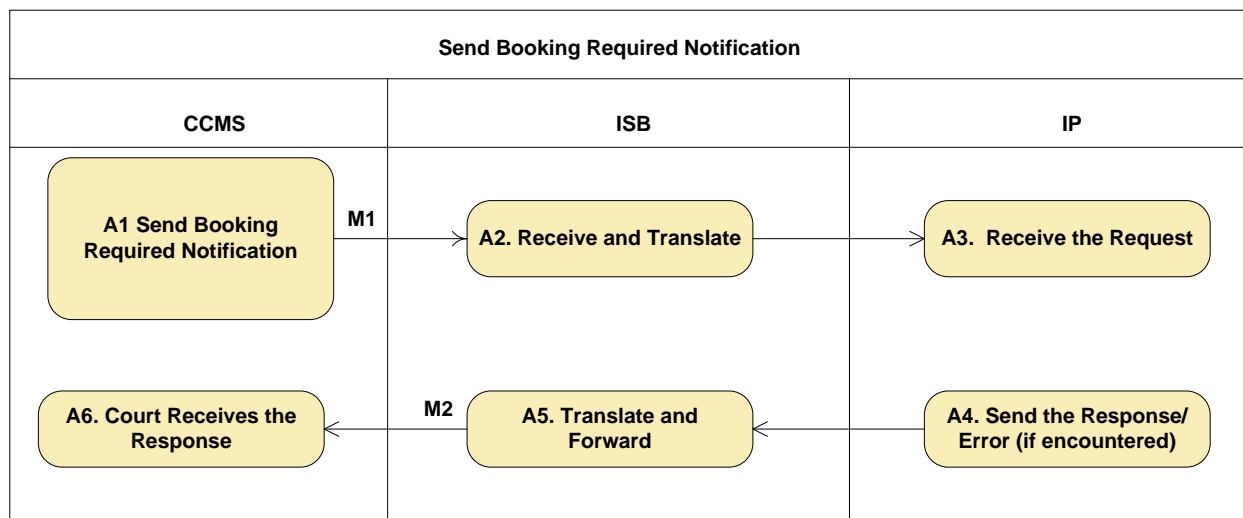

Figure 2. Court Sends Booking Required Notification Activity Diagram

3.2 Alternate Flow

This exchange includes three possible alternate flows, depending upon the nature of the problem.

- The ISB returned a positive acknowledgement to the source system (CCMS), and an exception occurs within the ISB, (e.g., schema validation) before the request is forwarded to the target system (integration partner). The ISB handles the exception and sends a response (containing a failure reason) to the source system (CCMS).
- The ISB returned a positive acknowledgement to the source system (CCMS), and an exception occurs when the ISB attempts to forward the request to the target system (integration partner). The ISB handles the exception and sends a response (containing a failure reason) to the source system (CCMS).
- The ISB forwards the request to the target system (integration partner) and receives a negative acknowledgement, (e.g., syntactic data error) from the target system. The ISB handles the exception and sends a response (containing a failure reason) to the source system (CCMS).

3.3 Messages

A data exchange message⁴ is a complete package of information sent between a court and an integration partner. This exchange includes two types of messages:

1. Request message
 - a. The Request message contains the booking required information, (e.g., CCMS case number, participant, and charges) sent by the court to the county sheriff.
2. Response messages
 - a. The Success Response message contains the booking processed response, (e.g., CCMS case number, participant, and booking processed indicator) sent by the county sheriff to the court.
 - b. The Error Response message contains error and error description information indicating the booking required message was not successful and corrective action is required.

⁴ As defined in the Justice Reference Architecture v1.8 February 2010.

4.0 Exchange Context

This section provides integration partners with information regarding the context of the exchange.

4.1 Triggering Events

A trial court sends a booking required request by initiating a felony, misdemeanor, or infraction case.

- Conditions = None

A trial court sends a booking required request by processing a fingerprint request for a felony, misdemeanor, or infraction case.

- Conditions = None

4.2 Subsequent Events

A county sheriff is notified and updates their system with the booking request.

- Conditions = None

CCMS is updated with the booking information received from the county sheriff.

- Conditions = None

5.0 Data Exchange Errors and Exceptions

“*CCMS Data Exchange Errors*” contains all exchange specific errors that may occur between an integration partner and CCMS; it includes the following three sections that list error codes, names, and descriptions for each error type:

- **Transient and non-transient errors** may occur while the ISB processes messages.
- **Functional errors** may occur while the ISB or CCMS process messages.
- **Transactional errors** may occur while processing a message in CCMS according to the Business Rule validations identified in [Section 6.0, Additional Business Rules and Processes](#).

6.0 Additional Business Rules and Processes

This section contains additional business rules and process requirements for an integration partner to successfully send or receive information from CCMS. The content of this section reflects specific rules that either cannot or are not enforced in the technical specifications that accompany the onboarding documents, specifically the mapping spreadsheets, exchange schemas, and code schemas. Integration partners must rely on this information to produce and consume valid messages exchanged with CCMS.

6.1 Business Rules

Table 1. Business Rules

Referenced Element	Business Rule Description
Last Name	Required if participant is not an Entity/Organization
Original Arrest Date	<ul style="list-style-type: none"> Must be greater than or equal to the earliest Court Violation Date Original arrest date should not be greater than the system date

6.2 Allowable Values

This section provides additional information regarding individual allowable values for elements contained in this data exchange. Essentially, allowable values come in two forms—AOC codes or Boolean types. This section also includes subsections that list the elements by type with specific instructions for each type.

6.2.1 AOC code values

Table 2 contains element names and the corresponding AOC Code Schema Table name.

- The AOC Code Schema contains the actual coded values and descriptions required for each element used in this exchange.
- The AOC Code Schema is provided in the exchange schema file under the “AOC Code” folder.

Integration partners should refer to the AOC Code Schema for all element-allowable values listed in Table 2.

As a reference, the AOC created the “AOC Codes” document, which lists all AOC code tables, values, and descriptions in alphabetical order. At the time of this writing, “AOC Codes” reflects the current values and should not be used as the authoritative source for validation purposes.

Table 2. AOC Code Values

Element Name	AOC Code Schema Table Name
Request	
Case Category	CaseCategoryCodeSimpleType
Case Status	CaseStatusCodeSimpleType
Case Type	CaseCodeSimpleType
Count Type	CountCodeSimpleType
Disposition Subtype	DispositionSubCodeSimpleType

Error Response	
Error Code	See "CCMS Data Exchange Errors" for a list of errors.
Error Description	See "CCMS Data Exchange Errors" for a list of errors.

6.2.2 Court configurable elements

Each local court has the ability to create, edit, and remove the allowable values for the following data elements within this exchange.

- Calendar Type
- Event Type
- Release Status
- Violation Location

In practice, many of these values are standard across courts, but integration partners should contact their local court administrator for an authoritative list of the court-specific allowable values. These values will be contained in the Court Policy File, which describes specific court business and operational rules (e.g., hours of operation, code lists, and fee schedules) in a machine-readable format. The Court Policy File for each local court will be developed as part of the CCMS deployment of that court. Integration partners can learn more about the Court Policy File by referring to the “*Court Policy File Overview*.”

6.2.3 Indicator element allowable values

This exchange includes numerous “Indicator” elements that provide additional information related to a specific condition or scenario. Following is a list of indicator elements contained in this exchange. The allowable values for each element must be either “true” or “false” or “1” = true or “0” = false. Integration partners should not rely on the exchange mapping spreadsheets for the indicator element allowable values, but rather the exchange schemas contained in the appropriate schema folder.

The following schemas are the authoritative source for the indicator allowable values:

- Legacy Case Indicator
- ID Commercial License Indicator
- Minor Indicator

6.3 Business Processes

There are no additional business processes that impact the exchange.

6.4 Data Classification

At the time of this writing, no security classifications or restrictions to the data contained in this exchange have been identified.

6.4.1 Privacy considerations

At the time of this writing, no specific privacy considerations for the content contained in this exchange have been identified.

7.0 ISB Message Processing

7.1 Routing

The ISB performs message routing for this data exchange. Routing rules are based on the content contained in the Common Service Header, which is described in the “*CCMS Data Exchange Common Technical Requirements*.” In addition, AOC will use the following data elements’ rules to route this exchange to an integration partner:

- Court Code
- Date Exchange Name
- Case Category
- Case Type
- Originating Agency

7.2 Message Interactions

This is an asynchronous exchange; however, all messages sent to the ISB are processed in real time. This means messages received by the ISB are validated, translated to the appropriate format, and routed to the destination immediately.

- Starting at 8:00 a.m., a message is retransmitted every hour until 4:00 p.m. before being declared unsuccessful.
- Starting at 4:00 p.m., a message is retransmitted every hour until 8:00 a.m. before being declared unsuccessful.

Refer to the “*Data Exchange Functional Design Guidelines*” for an additional description of the message interactions with the ISB and CCMS.
