

RESOLUTION FOR 702

RESOLVED, that the Board of Governors of the State Bar of California believes there is a need for a more technologically sophisticated statewide court case management system that moves the judicial branch further towards ensuring equal access to justice for all Californians, regardless of their county of residence; and it is.

FURTHER RESOLVED, that such a statewide court case management system provides far-reaching impacts that will make California's entire justice system more effective by: transforming trial courts' paper-based processes to an electronic environment where interactions occur much more rapidly, thereby improving the way the courts perform their day-to-day business; providing judges with critical, up-to-date information as they are hearing cases and making decisions; providing timely information to justice system partners; vastly improving public access to information and bringing such accessibility into conformity with modern technology and modern-day public expectations; saving critical resources for the courts, attorneys, and court users across the state; and it is.

FURTHER RESOLVED, a court case management system should be deployed statewide as soon as practicable in order to maximize the efficiencies of a statewide justice system.
