

JUDICIAL COUNCIL OF CALIFORNIA

QUESTIONS AND ANSWERS

CFCC-2019-16-CD Designing and User Testing Court Forms

November 12, 2019

1. Is JCC open to having court forms developed and delivered via HTML5 with the ability to save, submit, have a workflow, and provide the option to electronically sign them? If so, the data captured in HTML5 could be placed onto the PDF form when it is time to esign.

Answer: The purpose of this RFP is to redesign the way that forms look on paper, not to consider other modalities for development or completion at this time. Currently, the Judicial Council uses Adobe Experience Manager to develop forms.

2. Are you open to platforms that provide forms, workflow, document generation, and signature capabilities all in a single solution?

Answer: See response in 1.
