Native American Statistical Abstract: Population Characteristics

The Tribal Programs and the Family and Juvenile Business Intelligence Services units of the Administrative Office of the Courts' Center for Families, Children & the Courts (CFCC) are developing a series of informational abstracts that bring together the available data from various sources on American Indians and Alaskan Natives (AI/AN) nationally, statewide, and tribally specific to California's AI/AN population. The purpose of these abstracts is to develop and disseminate justice-related information and links to reports to ensure the highest quality of justice and service for California's AI/AN population. This information is intended for the state judicial branch, tribal justice systems, tribal organizations, state agencies, and local agencies to support effective collaboration and tribal justice development.

National Tribal Population

- According to the 2000 Census, 4.1 million U.S. residents reported being AI/AN alone or in combination with some other race, and almost 2.5 million reported being AI/AN alone.¹ Among counties in the United States, Los Angeles County (CA) had the highest population of AI/AN alone (76,988).
- In 2000, the majority of the AI/AN-alone population (64 percent) and the majority of the AI/AN-in-combination² population (92 percent) lived outside of tribal areas.³
- In 2000, Cherokee was the largest tribal population, representing approximately 18 percent of the total AI/AN population. The Cherokee population, at more than 700,000, is more than twice the size of the Navajo, the second-largest tribal population, at nearly 300,000. Other large tribal populations (roughly 150,000 or more) include Latin American Indian, Choctaw, Sioux, and Chippewa.⁴

¹ U.S. Census Bureau, Census 2000, Summary File 2.

² AI/AN alone refers to the population that self-identifies as being only AI/AN. AI/AN in combination refers to the population that self-identifies as being AI/AN in combination with one or more other races.

⁴ U.S. Census Bureau, "American Indian, Alaska Native Tables from the Statistical Abstract of the United States: 2004–2005," p. 38 (p. 11 of the PDF), table 35, www.census.gov/statab/www/sa04aian.pdf (as of July 8, 2011). Note: The information on tribes is based on self-identification and includes federally or state-recognized tribes, as well as bands and clans.

California Tribal Population

- In 2003, California had the largest population of AI/AN alone (413,000); the second-largest AI/AN population was in Arizona (294,000), followed by Oklahoma (280,000). California represented 15 percent of the total AI/AN-alone population in the United States.⁵
- Although California has the largest tribal population in the United States, it has very little tribal land. (See http://www.waterplan.water.ca.gov/tribal2/docs/GW_Basins_and_Tribal_Trust_Lands_map.pdf.)
- According to 2008 population estimates, California has more than 700,000 AI/AN citizens (alone or in combination with another race) residing in both rural and urban communities.⁶ Only 3 percent of California's AI/AN population lives on a reservation or rancheria.⁷
- California's Native American communities include descendants or members of 108 California-based federally recognized tribes (about 20 percent of all tribes in the United States).⁸ As of 2008, an additional 74 tribes in California are petitioning for federal recognition.
- The California tribal population consists of a significant number of members of tribes not based in California. More than half of the Native Americans living in California are members of tribes located outside of California.⁹
- The AI/AN-alone or -in-combination population makes up 2 percent of California's total population. Approximately 40 percent of California's AI/AN population is AI/AN in combination with one or more other races (predominantly white), and 60 percent of California's AI/AN population identifies as AI/AN alone.¹⁰
- Cherokee is the largest tribal population in California (approximately 18 percent), followed by Apache (6 percent), Navajo (5 percent), and Choctaw (5 percent).¹¹

County Tribal Populations

- Based on the 2000 U.S. Census, Los Angeles County (CA) has the largest AI/AN-alone population (76,988) in the United States.
- Ten California counties are included in the 50 U.S. counties with the highest AI/AN-alone populations. In addition to Los Angeles County, San Diego, San Bernardino, Orange, and Riverside Counties are among the top 20 in that group (see table 1).¹²
- Alpine County has the highest proportion of AI/AN-alone residents (19 percent), followed by Inyo County (10 percent), and Del Norte County (6 percent).¹³

County	Population	U.S. Rank
Los Angeles	76,988	1
San Diego	24,337	11
San Bernardino	19,915	14
Orange	19,906	15
Riverside	18,168	17
Sacramento	13,359	24
Fresno	12,790	26
Santa Clara	11,350	30
Kern	9,999	38
Alameda	9,146	43

Education and Household Income

- Nationally, the AI/AN-alone population has a lower percentage of individuals with at least a high school diploma (71 percent) than does the general population (80 percent). This discrepancy is largely because the AI/AN population is less likely to have a bachelor's (or higher) degree (11 percent) than the general population (24 percent).¹⁴
- In California we see a similar discrepancy in educational attainment. The percentage of individuals with at least a high school diploma is lower for the AI/AN-alone population than for the California population as a whole (68 percent and 74 percent, respectively) as is the percentage of those with a Bachelor's (or higher) degree (11 percent, compared to 27 percent of California as a whole).¹⁵
- The median income for all California households is \$47,493, whereas the median income for the AI/AN-alone population is \$36,547.¹⁶
- Thirty-four percent of AI/AN households have an income of less than \$20,000. Of those, roughly half (17 percent) have an income of less than \$10,000.
- About 62 percent of all AI/AN households fall below the U.S. median household income level.

¹⁶ *Ibid*

Households and Families

- The AI/AN population has a lower proportion of married-couple households (45 percent) than does the U.S. population as a whole (53 percent) and a higher proportion of both male-headed and female-headed households with no spouse present (28 percent) than that of the total U.S. population (16 percent).¹⁷
- The AI/AN population has a higher average household size (3.06 persons) than does the U.S. population as a whole (2.59).¹⁸
- Nearly 4 percent of the total U.S. grandparent population (30 years old and over) live with grandchildren, whereas 8 percent of the AI/AN population of grandparents live with grandchildren.¹⁹
- AI/AN grandparents are more likely to be responsible for coresident grandchildren (56 percent) than is the total U.S. population (42 percent), as illustrated in figure 1.²⁰

Note: At the time of release of this update, data from the 2010 Census was being made available. Some findings from the most recent Census include a national AI/AN population of 5.2 million residents and a California AI/AN population of 723,000. This report will be updated as more 2010 Census data becomes available.
