

SUPERIOR COURT OF CALIFORNIA, COUNTY OF SAN DIEGO Office of the Family Law Facilitator

HOW TO CALCULATE YOUR TIMESHARE

1. Write down the number of <u>actual hours</u> you spent with your child in a given month. Example: You spent two weekends with your child in January, from Friday night at 7 p.m. to Sunday night at 7 p.m. each visit. You would have spent 48 hours each time, or 96 hours total, with your child in January. January visitation hours = 96.

To figure out what your timeshare was for January, you calculate as follows: There are 744 total hours in January (31 days x 24 hours per day = 744 hours). Divide the number of visitation hours in January (96) by the total number of hours in January (744). 96 visitation hours \div 744 total hours = 12.9%.

2. Now let's say that in February you had two weekends the same as in January, but you also had additional visitation each Wednesday from 2 p.m. to 8 p.m., an additional 24 hours that month (4 Wednesdays x 6 hours per visit = 24 additional hours) Your total visitation time would be 120 hours (96 for the weekends and 24 for the Wednesday visits).

To figure out what your timeshare was for February, you calculate as follows: There are 672 total hours in February (28 days x 24 hours per day = 672). Divide the number of visitation hours in February (120) by the total number of hours in February (672). $120 \div 672$ total hours = 17.8%.

3. To average your timeshare for any period of months, add the percentages for the number of months calculated, then divide by the number of months. Example: For the six month period January through June:

Add the percentages together: 12.9% + 17.8% + 21.2% + 16% + 18.5% + 20% = 106.4%Divide the total percentage by the number of months: $106.4\% \div 6$ months = 17.73% average monthly timeshare
